# 173A: COMPUTER EXERCISES 

MICHIEL KOSTERS (MKOSTERS@UCI.EDU)

## Exercise 1

Wite a program to compute $\pi(X)$ (hint: implement the sieve of Eratosthenes). Compute $\pi\left(10^{5}\right)$.

## Exercise 2

Write a sieve which on input $X$ and $B$ computes $\psi(X, B)$. Use your function to compute $\psi\left(10^{4}, 20\right)$.

## Exercise 3

Factor 8405801 using the difference of squares method (you should be able to do this without sieving; write a trial division function to test for smoothness).
